

Merlin Major 21

Car Showroom Turntable

The Merlin Major 21 revolving car turntable platform is virtually invisible in operation, allowing vehicles to be rotated as if by magic. Used across the World by major car manufacturers in car showrooms, exhibitions and product launches, the Merlin Major 21 combines eye-catching movement with ease of installation.

Designed to rotate the majority of contemporary vehicles, the revolve is ideal for turning both smaller family sized saloons and larger prestige marques up to 2,500kg in weight. This flexibility ensures that a full vehicle stock can be rotated, enabling attractive yet cost-effective displays to be created.

Totally portable and requiring no floor fixing, the robust, compact, versatile and extremely smooth running Merlin Major 21 can even be used outdoors, operating from the car's own 12 volt battery, opening it up for forecourt use, launch events, special vehicle brand displays or promotions at the local shopping mall.

Like revolving stage turntables, the Merlin Major 21 features 5 amp slip rings to provide an electrical connection to the rotating element, thereby enabling further lighting and other special effects to be used.
