Vehicle turntables provide effective access solutions, from improving car parking provision in city centre office blocks, to enabling truck access to sites that would not otherwise be accessible.

What are the benefits of installing a Vehicle Turntable?

Assists manoeuvring in restricted areas

Vehicle turntables can assist with vehicle manoeuvring in restricted areas. This also makes the working area a much safer place by reducing vehicle movement.

Frees up space for more profitable use

Installing a vehicle turntable can help free up valuable storage space for more profitable use. A smaller yard area is required when a turntable is installed.

Helps with planning requirements

Vehicle turntables can aid in helping to meet local planning requirements – when vehicles are required to only enter/exit a facility in forward gear.

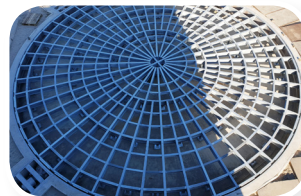

Supports logistics and environmental issues

Vehicle turntables can improve logistics by reducing delivery turn around times, also improving environmental pollution, vehicle emissions and tyre scrub.

Movetech UK is in the unique position of being able to offer both mechanical and low profile air film turntable solutions. This, combined with the company's unrivalled reputation for providing expert advice, quality engineering and excellent service, has led to Movetech UK being chosen to solve access and parking problems in city centre office blocks, department stores and shopping centres, retail parks, Crown Courts and other Government buildings.

Units can be built for internal or external use and for integration into a suspended slab or ground slab, as required. Most are based on standard, tried and tested design models, and in all cases they offer low noise, ease of use and a reliable, long life with minimal service and maintenance costs.

In each case, dedicated Movetech UK engineers work closely with architects, surveyors and project engineers from Government buildings.

Vehicle Turntables

Movetech UK works with standard and bespoke designs to build structural turntables to rotate any vehicle, from the smallest of cars in an underground car park, to an HGV in a city centre retail delivery area, not forgetting military aircraft and vehicles.

Where a very low-profile pit is required, the turntable can be floated on a film of air using Movetech UK's Hovair air bearing technology. This system may be preferred where the turntable is to be installed in a suspended slab.

Typical Service Yard Layout

Movetech UK's vehicle turntables are available with the following options:

- Internal or external use
- Weather, corrosion and environmental protection
- Integration into a ground slab or suspended slab
- Electric, pneumatic or hydraulic drives
- Position control
- Fixed or variable speed, soft start and/or stop
- Remote control
- Security features
- Safety features
- Low profile requirements

Our dedicated team of engineers and trained technicians will offer advice and assistance to any query we believe falls within our expertise, always with a mind to ensuring the goals of quality, safety and value are delivered.
